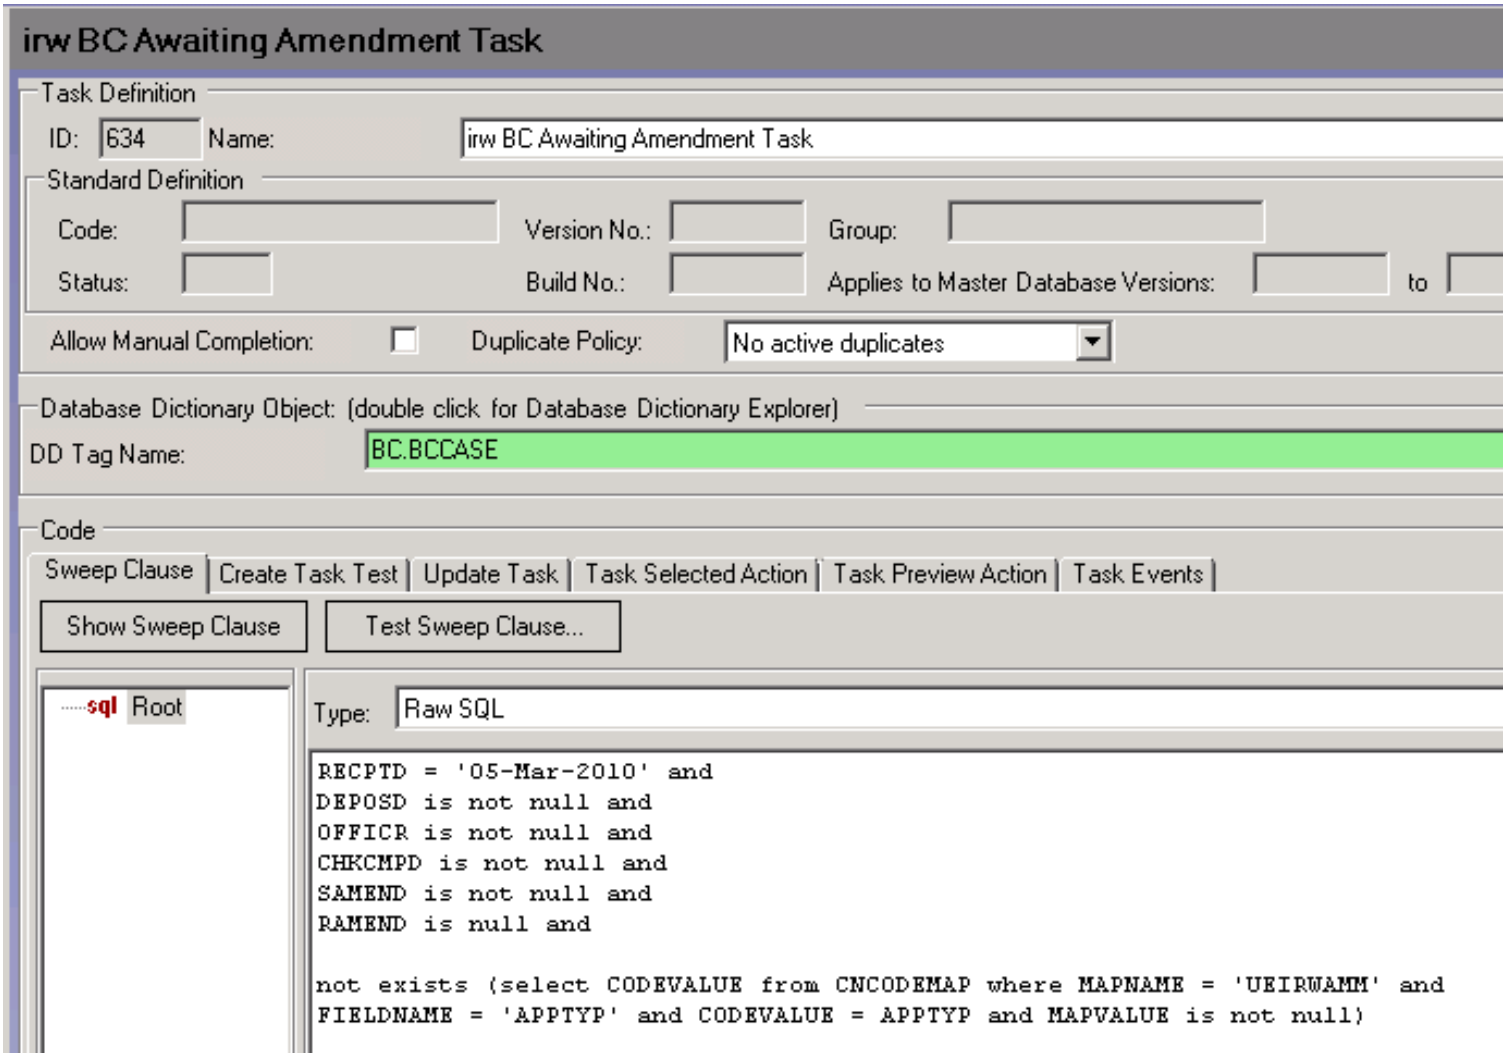
BC Task 1 Awaiting Amendment Task

Sweep Clause



RECPTD = '05-Mar-2010' and
DEPOSD is not null and
OFFICR is not null and
CHKCMPD is not null and
SAMEND is not null and
RAMEND is null and
DECIDD is null

not exists (select CODEVALUE from CNCODEMAP where MAPNAME = 'UEIRWAMM' and
FIELDNAME = 'APPTYP' and CODEVALUE = APPTYP and MAPVALUE is not null)

Update Task

Working Days Calculation – Requested to Today

```
//SCRIPTINFO<Variable><Name>AmendmentRequestedToToday</Name><Type>Int</Type></Variable>
SCRIPTINFO
int AmendmentRequestedToToday = data.CalculateWorkingDaysBetween(data.SAMEND,data.TodayD);
```

Task Title

```
task.TaskTitle = "irw Awaiting Amendment " + data.REFVAL.ToString() + " " +
data.GetFirstLine("ADDRESS");
```

Task Hint

```
task.TaskHint = "Days since Amendment Requested: " + AmendmentRequestedToToday.ToString();
```

Task Help

```
task.TaskHelp = "This task is completed when an Amendment is received. Amendment Requested on:   "
+ data.SAMEND.ToLongDateString();
```

Task Priority [Red only?]

```
if ((AmendmentRequestedToToday >= 0) && (AmendmentRequestedToToday <= 3))
        task.TaskPriority = 30;
 else if ((AmendmentRequestedToToday >= 4) && (AmendmentRequestedToToday <= 6))
        task.TaskPriority = 70;
 else if ((AmendmentRequestedToToday >= 7) && (AmendmentRequestedToToday <= 9))
        task.TaskPriority = 75;
 else if (AmendmentRequestedToToday >= 10)
        task.TaskPriority = 100;
```

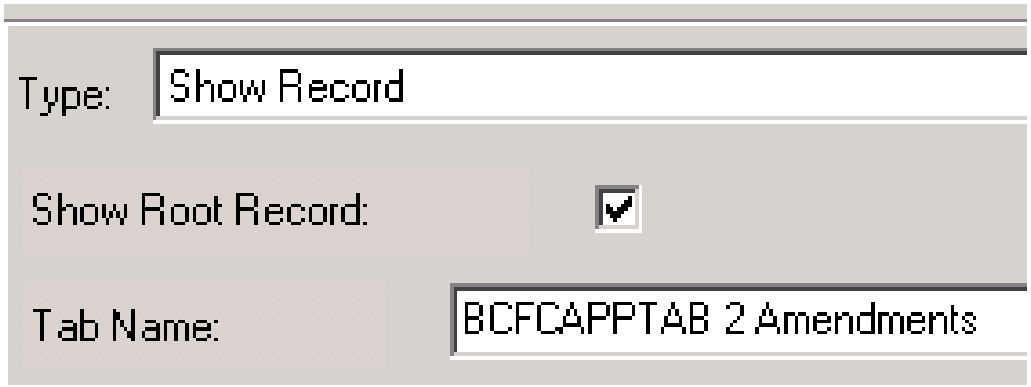
Task Allocation

```
task.TaskUserID = data.GetOfficerUserIDFromField("OFFICR");
```

Task Completion

```
if ((data.FieldIsNotNull("RAMEND))
        return true;
else
        return false;
```

Task Selected Action[s]



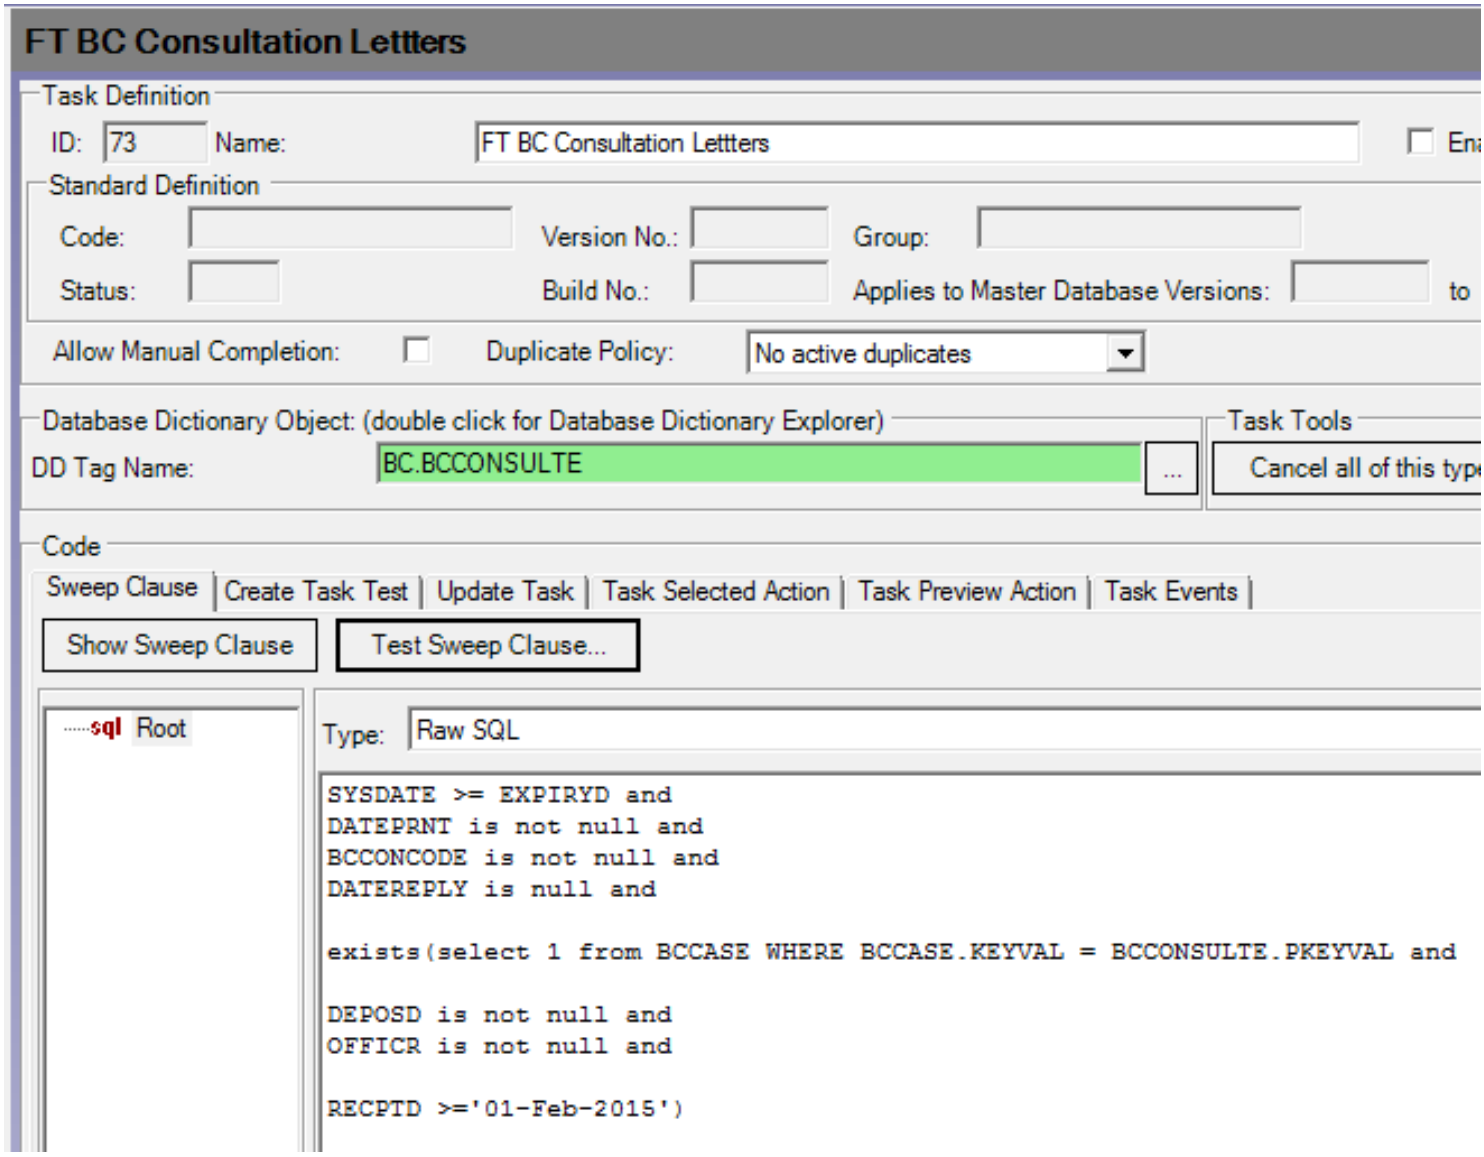
BCFCAPPTAB 2 Amendments

Task Events

data.SetOfficerAsLoginID("OFFICR",newUserIDOverride);

BC Task 2 Consult Task: Consultee Expiry, Reply Received-Follow up

Sweep Clause



DATEPRNT is not null and
BCCONCODE is not null and
DATEREPLY is null and

exists(select 1 from BCCASE WHERE BCCASE.KEYVAL = BCCONSULTE.PKEYVAL and

DEPOSD is not null and
OFFICR is not null and
RECPTD >= ’01-Feb-2015’) and

SYSDATE >= EXPIRYD

‘Update Task

Working Days Variable Expiry to Today [Count from Expiry]?

```
//SCRIPTINFO<Variable><Name>iWorkingDays</Name><Type>Int</Type></Variable>SCRIPTINFO
int iWorkingDays = data.CalculateWorkingDaysBetween(data.EXPIRYD,data.TodayD);
```

Task Title

```
task.TaskTitle = "irw Consultee Expiry Followup " + data.LUPKEYVAL.REFVAL + " " + data.LUPKEYVAL.GetFirstLine("ADDRESS");
```

Task Hint

```
task.TaskHint = "Consultee reply not received, Expiry date for consultee is " + data.EXPIRYD.ToLongDateString();
```

Task Help

```
task.TaskHelp = "Chase up consultee for reply and then complete the Reply Received field on the Consultee tab. The ";
```
